Sold @ TGE:	up to maximum issue	\$5.5m - \$8.0m	10%
Token Mechanics:	ERC20	\$8.0m+	No Bonus

EXECUTIVE SUMMARY:

VVToken is introducing two technology-based products under our CyberBank™ brand that will revolutionize electronic connectivity between fiat and cyber currencies. The CyberBank™ Platinum card, a prepaid debit card focused upon low-to-middle income users, and the CyberBank™ Black Card, a feature-rich card that enables high-net-worth individuals to smoothly switch between fiat and cryptocurrencies and potentially benefit from currency fluctuations. Users will leverage assets on our C*Commerce™ platform, a marketplace for the exchange of VVToken points for a variety of goods and services.

BUSINESS PROPOSITION:

VVTokens will use the ICO funds to underwrite the final development and launch of its new blockchain consumer finance platform, CyberBank™. The goal is to raise \$22m USD equivalent in ETH by selling 497,700,000 VVTokens. The final amount of VVtokens issued will determine the exchange rate, which will be set immediately before deploying the contract. Following the ICO, the value of VVTokens to ETH will float according to the market. There is no plan to have a follow-on offering. Crowdsale purchased VVTokens will be transferable on listing exchanges once the ICO closes and the tokens are issued.
